

# Image flipping

A post on the flashcoderlist (<http://www.mail-archive.com/flashcoders@chattyfig.figleaf.com/msg34296.html>) asking about an image turn around effect got me coding for 2 hours in a row until I finished it and realized my effect was not quite similar to what was required (<http://www.ja-ik-doe-mee.be/>).

Anyway I liked it nonetheless so posting it anyway.

You can download this example here (Flash IDE & FlashDevelop / MTASC compatible): [ImageTurnEffect \(912\)](#).
